Syllabus
Advanced Ecology: Fundamentals of Ecological Modelling
BIO 534 & BIOL 534

Stuart R. Borrett
Fall 2017

Course Description
Scientists investigate the dynamics of complex systems with quantitative models, employing them to synthesize knowledge, to explain observations, and to forecast future system behavior. This course introduces the basic principles of ecological modeling including model conceptualization, construction, analysis, use and abuse. Students will develop knowledge and skill through a sequence of exercises and laboratories that culminate with the design, implementation, and evaluation of their own process-based simulation model. At the completion of the course, successful students will be able (1) to use modeling knowledge to construct dynamic simulation models, and (2) to comprehend and evaluate models presented in the literature.

Contact Information

Stuart R. Borrett
Office: Friday Hall 1057
Office Phone: 910.962.2411
Email*: borretts@uncw.edu
Office Hours: By appointment

* I will respond to email as soon as possible, but please allow 24 hours for a response. If you require a faster response you may call my office phone.

Course Goals

Course Learning Outcomes

Through your experiences in Bio534 and BIOL334 you will be able to:

- Construct and use process–based simulation models to evaluate ecological hypotheses;
- Understand the fundamental concepts in ecological modeling and their application;
• Interpret and critique primary literature that uses models;
• Communicate modeling results to a scientific audience; and
• Become more effective, self-assessing, and self-directed learners.

What are your personal goals for Bio534?
• What do you want to know and be able to do by the end of this course?
• Do you feel prepared to achieve these goals?
• How will you attempt to achieve these goals?

Faculty Goals
My goals for this course are best stated by Ebert–May and Tsao (2007) as follows:

• As a facilitator I will encourage and create a learning environment in which all students are actively engaged in the process of scientific thought and reasoning.

• I will guide your development toward higher-order thinking and reasoning skills so you can successfully explore and demonstrate achievement of each of the goals above.

About the Course
In class meetings there will be lectures, readings, story-telling, student presentations, discussions, problem–solving, and more. I expect you to work cooperatively in our meetings as well as study together outside of class. Together, we will uncover much about ecology and ecological modeling. I will strive to make the class as active and cooperative as possible.

You are expected to read assignments ahead of the class meeting scheduled to address that topic. In class, we will often discuss only parts of a chapter or advanced topics that build upon the reading. Thus, we may not review all of the reading in class, but you remain responsible for this material for quizzes and exams. If you don’t read prior to class and laboratory you should not be surprised if you become lost during the discussions and activities. You are expected to accept responsibility for your own learning.

Schedule and Assignments
The schedule and assignments for lecture and laboratory are listed on the course website http://people.uncw.edu/borretts/teaching.html.

This is an initial plan that I expect we will adapt as the course progresses. However, I will work not to shift the dates of the exams or assignment due dates unless absolutely necessary and we all agree.

The lecture course is designed so that we first discover core concepts. The latter part of the course is comprised of case studies, driven by discussing primary literature.

The laboratory is a scaffolded set of applied learning opportunities to build your understanding of the core modeling and simulation concepts, your skills with implementing the models with R and applying ecological modeling to do primary research and teaching.
Texts and Readings

We will read material from a variety of sources including textbooks and primary literature. The required text is N. Gotelli’s (2008) *A Primer of Ecology* (4th ed), Sinauer, MA, which is available in the bookstore. Other assigned readings will be available as PDFs from the course website which can be found at [http://people.uncw.edu/borretts/teaching.html](http://people.uncw.edu/borretts/teaching.html). I will also post lecture notes and laboratory assignments on the website.

In addition to the assigned readings, I recommend the following texts for further exploration.

**Ecological Modeling**

**Programming with R**

**Assessment**

Ecological modeling requires active engagement and inquiry to learn. Therefore, material in class meetings is integrated with the laboratory exercises. The laboratories build in complexity allowing you to develop your skills with programming, mathematics, and ecological modeling.

Lecture work will be assessed following the scheme in Table 1. Please notice that the course grade is dominated by two exams that will cover the concepts and theory we discuss in the first part of the class. Additional assessments include in class participation, homework assignments, and a reading proposal. The participation score includes attending class prepared to engage with the material as well as actively participating in class activities and discussions.

<td><strong>100</strong></td>
</tr>
</tbody>
</table>

**Laboratory** will be assessed using the scheme in Table 2. The laboratory exercises will culminate in a brief summary of the activities. I encourage you to work in small teams to complete the laboratories, but everyone will write their own summaries, as this will allow me to assess your individual work and written communication skills. In addition, the laboratory will have two projects. The first project is an ETEAL initiative teaching project. In this project you will build R Shiny web-apps for ecological modelling learning modules for the undergraduate ecology course. The second project is a final course research project in which you will have to apply what you have learned about ecological modelling to address a new res.

The final course research project will be 45% of the laboratory grade.

† This is an ETEAL supported applied learning project. Please review the ETEAL Supported Experience notification in the “University Resources and Policies of Concern” section.
University Resources and Policies of Concern

Disabilities

If you are a person with a disability and anticipate needing accommodations of any type for this course, you must first notify Disability Services (DePaolo Hall, http://uncw.edu/disability/), provide the necessary documentation of the disability, and arrange for the appropriate authorized accommodations. Once these accommodations are approved, please identify yourself to me in order that we can implement these accommodations.

Violence and Harassment

UNCW practices a zero-tolerance policy for violence and harassment of any kind. For emergencies, contact UNCW CARE at 910.962.2273, Campus Police at 910.962.3184, or the Wilmington Police at 911.

Academic Honor Code

The Department of Biology and Marine Biology and I strongly support the Academic Honor Code as stated in the “Student Handbook and Code of Student Life,” and we will not tolerate academic dishonesty of any type. The UNCW Academic Honor Pledge is

As a student at The University of North Carolina Wilmington, I am committed to honesty and truthfulness in academic inquiry and in the pursuit of knowledge. I pledge to uphold and promote the UNCW Student Academic Honor Code.

The University Learning Center

The University Learning Centers (ULC) mission is to help students become successful, independent learners. Tutoring at the ULC is NOT remediation: the ULC offers a different type of learning opportunity for those students who want to increase the quality of their education. ULC services are free to all UNCW students and include the following:

- Learning Services (University Studies) http://www.uncw.edu/ulc/about/index.html
- Math Services http://www.uncw.edu/ulc/math/index.html
- Supplemental Instruction http://www.uncw.edu/ulc/si/index.html
- Writing Services http://www.uncw.edu/ulc/writing/index.html

ETEAL Supported Experience

This notice specifically applies to the Teaching Ecological Modelling Project that is part of the laboratory course (BIOL534).

This applied learning experience is part of ETEALExperiencing Transformational Education through Applied Learning. One or more assignments/reflectors in this course have been chosen for the purpose of assessing ETEALs impact. The assignment/reflection will be graded by your instructor as explained in your syllabus. Any separate scoring of the assignment/reflection for the purposes of ETEAL assessment WILL NOT affect your grade in the course, or any other course work at UNCW. Through your participation, you will help the university to identify potential
ways to improve the quality of applied learning experiences and enhance student learning. All work submitted will remain confidential and we will remove all identifying information before your work is read and scored. Anonymous excerpts from your reflections may be used for research and documentation purposes. In the process of this experience, photos may be taken of your applied learning activities and may be used for promotions, reporting, or educational purposes. If you do not wish to appear in any photos or would not like your image used in this way, please notify your instructor.

Cornerstone Pledge

<table>
<thead>
<tr>
<th>I am an engaged learner in constant search of knowledge.</th>
</tr>
</thead>
<tbody>
<tr>
<td>I foster human dignity through acts of civility and respect.</td>
</tr>
<tr>
<td>I maintain a distinguished character based on truth, honesty, and integrity.</td>
</tr>
<tr>
<td>I pursue inner peace by recognizing the significance of spirituality.</td>
</tr>
<tr>
<td>I demonstrate honorable citizenship through acts of civic engagement.</td>
</tr>
<tr>
<td>I embrace community by active involvement and service.</td>
</tr>
<tr>
<td>I lead a lifestyle that advances physical health and emotional well-being.</td>
</tr>
</tbody>
</table>

You can learn more about the Cornerstone Pledge and the values of the UNCW community at http://uncw.edu/communitystandards/cornerstone.html.
