Presentations
Tell us what you are going to say …. Say it …. Tell us what you said

1. Title Page
   Title
   Partner Names
   Abstract
   SVSM 2008
2. State Problem
3. Outline
   Generally tell us what you will say in a few words – to be discussed in detail later. The presentation is a story and should flow.
4. Background/History of Problem
   Introduce the history of the problem, any famous people who might have contributed and something interesting about them, (birth-death), why the problem is interesting/important.
5. Describe How to Model Problem
   Don't just write down the equations – try to provide a derivation of the model so the audience understands the model. Define terms, variables, provide diagrams, key equations and principles. What assumptions were made?
6. Results
   Describe how you tested your model, test cases, data sets used, and what results came out of each case. Provide information in tables, graphs, etc. Where appropriate, provide simulations, curve fitting, etc.
7. Discussion
   What did you learn from the results? What observations did you make about how the model worked or what you saw in your study of the model? What worked and what did not work?
8. Variations in Model
   Based on what you did, how could you change the model or test any conjectures based on your observations? Can you change any assumptions? What would the new model look like? Develop a new model and describe and test it.
9. Additional Results
   Provide more results based on the variations and compare them to your original model.
10. Summary
    Summarize what you just said – similar to the Outline, but point out key results and conclusions.
11. Future Work
    Where could one take this work? What other variations might be tried. What did you find most interesting?
12. Bibliography
    In the course of your work you used both print and electronic resources. List these alphabetically, providing Author(s), date, title, publisher, location. For web sites, try to find the author and date if possible. Also, provide title and URL (web address).
13. Acknowledgments
    You can acknowledge the instructors, the SVSM staff … parents … etc.

Slides should not have paragraphs unless a quote is needed in full. Use bulleted statements. No note cards are used, but the presentation itself is your set of note cards.
