

Instructions:

- Place your name on all of the pages.
- Do all of your work in this booklet. Do not tear off any sheets.
- Show all of your steps in the problems for full credit.
- Be clear and neat in your work. Any illegible work, or scribbling in the margins, will not be graded.
- Put a box around your answers when appropriate.
- If you need more space, you may use the back of a page and write *On back of page #* in the problem space or the attached blank sheet. **No other scratch paper is allowed.**

Try to answer as many problems as possible. Provide as much information as possible. Show sufficient work or rationale for full credit. Remember that some problems may require less work than brute force methods.

If you are stuck, or running out of time, indicate as completely as possible, the methods and steps you would take to tackle the problem. Also, indicate any relevant information that you would use. Do not spend too much time on one problem. **Pace yourself.**

Pay attention to the point distribution. Not all problems have the same weight.

Bonus: Derive a general solution, $u(x, t)$, of $\frac{\partial^2 u}{\partial x \partial t} = 0$.

1. (4 pts) Consider the vibrating string solution, $u(x,t) = \sum_{n=1}^{\infty} c_n \sin 3nx \cos 9nt$,
- Show this is the sum of left and right traveling waves.
 - What is the wave speed? _____
2. (4 pts) Find the eigenvalues, λ , and eigenfunctions, $y(x)$, for the boundary value problem: $y'' + y = \lambda y$, $y(0) = 0$, $y'(\pi) = 0$.
3. (3 pts) Given the initial conditions $u(x,0) = \sin(\pi x) - 0.5 \sin(5\pi x)$, $u_t(x,0) = 0$, $x \in [0,1]$ for a vibrating string with two fixed ends and wave speed $c = 3$, write down the solution $u(x,t)$.
4. (5 pts) Classify the equations over regions of the xy -plane.
- $u_{xx} + 2u_{xy} + u_{yy} + u_x = 0$. _____
 - $u_{xx} + 2u_{xy} + \frac{1}{2}u_{yy} = 0$. _____
 - $2u_{xx} + 6u_{xy} + 5u_{yy} + u_x = 0$. _____
 - $xu_{xx} - yu_{yy} = 0$. _____

5. (9 pts) Let $f(x) = 2 - \frac{x^2}{2}, 0 \leq x \leq 2$.

a. Sketch several periods of the following and state the period:

i. The periodic extension. Period = _____

ii. The odd extension. Period = _____

iii. The even extension. Period = _____

b. Find the Fourier Cosine series, $f(x) \sim a_0 + \sum_{n=1}^{\infty} a_n \cos \frac{n\pi x}{2}$, for this function.

6. (5 pts) Find the Fourier series representation of $f(x) = \begin{cases} x, & 0 < x < 1, \\ 0, & 1 < x < 2. \end{cases}$
7. (5 pts) Consider Laplace's equation, $u_{xx} + u_{yy} = 0$, on the unit square satisfying the boundary conditions: $u_x(0, y) = 0$, $u(x, 0) = 0 = u(x, 1)$.
- Carry out a separation of variables and give the differential equations for the product functions, $X(x)$ and $Y(y)$.
 - Write down the product solutions, $u_n(x, y)$, satisfying the boundary conditions without doing a lot of work.
8. (4 pts) Consider the functions $\{A, Bx, Cx^2\}$ defined for $x \in [-1, 1]$.
- Which pairs of these functions are orthogonal?
 - What would C need to be for Cx^2 to be normalized?
