

1. Visit www.eclipse.org.
2. Discuss Eclipse installation.
3. Do basic “Hello, World!” tutorial.
4. Design and implement two classes. One of them has the capability to compare three numbers, find the maximum of the three, and find the minimum of the three. The second class is your application that asks a user for three numbers, uses the first class that you created, and displays both the maximum and minimum of the three numbers.
5. Begin a new project in Eclipse to code the classes that you designed.
6. Redesign and modify your classes so that the user could enter five numbers and perform the same operations.
