- This course is entirely memorization, but Dr. Pawlik is upfront about that from the beginning and makes students aware of the difficulty level. He is a good lecturer, and makes it clear what is expected to be known on the exams. He is easy to get in contact with and clearly enjoys the subject matter he teaches. This was a difficult and time consuming course but I overall enjoyed the lectures and knowledge I gained.
- You are an incredible professor and it's very obvious how much you enjoy teaching this class. You always made it interesting and fun. You were definitely one of my favorite professors.
- Whenever you have to resort to giving students a passing grade as long as they come to every class because everyone is failing, I think that says something about your teaching style and the curriculum. You can blame it on cell phones and bad study habits all you want but your teaching styles have to adapt with the changing times. The education system is drastically different from what it was in the 1990s and it is the job of the teacher to be able to adapt and teach their curriculum to their students.
- One of the best instructors I've ever been able to have so far, incredibly knowledgeable of the ocean and very fun and interactive lectures unlike any course I have taken before. I will certainly miss this class Dr Pawlik- Cole Argay
