### Comments -

- I loved everything about this class and I am more than happy I enrolled. However, it was BY FAR the most difficult course I have ever taken in my life. Dr. Pawlik is a brilliant professor that knows his shit! The lab practical will cause symptoms similar to that of a stroke and make you contemplate what you are doing with your life, all the while you are trying to think of what family and order a smudge on a slide is. But don't worry, its only 100 fill in the blank questions. The tests are easy compared to the practical though so there's that. I hope one day I can know all he material that was presented to me in this class. I would HIGHLY recommend taking this course.
- This was a very challenging course but I definitely learned more in this course than any other course I have taken at UNCW. The material was presented in a very organized fashion that made it easy to follow trends across different phyla. I had to spend a good amount of time to prepare for the tests and learning the taxonomy was one of the harder things to pick up on. The lab followed the lecture material spot on. I liked it better when the lecture was ahead of lab because it was easier to identify anatomical structures of the organisms at the stations.
- Dr. Pawlik is a fair teacher who teaches more subject material than is tested on, which is the reason I think the course is as difficult as it is. Dr. Pawlik is more passionate about any marine biology subject than any teacher I have ever had, so it is really excited to learn from him. He expects you to learn a lot of difficult material at a fast pace but this should be no surprise for the subject. I think that having 5 exams and a final is great for the amount of material that is covered throughout the course, and Dr. Pawlik divides the "units" in an organized and linear manner. I also really liked that the lab would be setup at the beginning of the week and open to complete by the end of the week on your own time with 24 hour access. Overall, this course is challenging, but pushes your intellect and learning abilities to a very useful subject matter for any marine biology major. I believe that this course should be required because of the amount of information that is covered and its importance to (marine) biology.
- Invert Zoology was a really great class. Id say Dr. Pawlik is one of the best lecturers in marine bio. There is a lot of content, but the way everything is organized and presented is very effective. If you choose to take the class, understand that is has to be a priority among your other classes or else you will not do well; it is more challenging than your average 300 level course at UNCW. Dr. Pawlik was always willing to make sure every individual understood concepts. 10/10 would recommend.
