Exploited Fishery Resources

Reading: Chapter 3

Invertebrate and vertebrate fisheries

- Diversity and life history
- > species important globally
- » species important locally

Fisheries involving Invertebrate Phyla

Mollusca

 Bivalves, Gastropods and Cephalopods

Echinodermata

· sea cucumbers and urchins

Arthropoda

- · Sub-phylum Crustacea:
- shrimps and prawns
 - · clawed lobsters, crayfish
 - · clawless lobsters
- crabs

b Jannings, Kalast, Reynolds

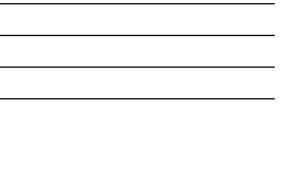

Phylum Mollusca: Bivalves

Fisheries

- Oysters, Scallops, Mussels, and Clams
- World catch > 1 million MT
- Ideal for aquaculture (mariculture)
- · Comm. and rec. in shallow water

Phylum Mollusca: Gastropods

Fisheries

- · Snails, whelks, abalone
- Largest number of species
- Most harvested from coastal areas
- Food & ornamental shell trade
- Depletion of stocks (e.g. abalone) due to habitat destruction & overexploitation

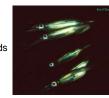

Phylum Mollusca: Cephalopods

Fisheries

- · Squid, octopus, nautilus
- 70% of world mollusc catch = squids
- · Inshore squid caught with baited
- jigs, purse seines, & trawls
- Oceanic: gill nets & jigging

Phylum Echinodermata

Fisheries

Sea cucumbers and sea urchins

- Sea cucumber fisheries
 - Indian & Pacific oceans, cultured in Japan
- slow growth rates, difficult to sustain Sea urchin fisheries
 - roe (gonads) a delicacy
 - · seasonal based on roe availability
- Both Easily Overexploited

Sub-phylum Crustacea: Shrimps & Prawns

Prawn fisheries

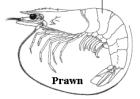

- extensive farming (high growth rate & fecundity)
- Penaeids with high commercial value
- stocks in Australia have collapsed due to overfishing & destruction of inshore nursery areas

Caridean shrimp fisheries

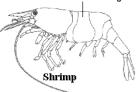

- slow growth, delayed maturity, few eggs
- overexploitation causes quicker decline
- include Pandalids and Crangonids

Second abdominal segment

Second abdominal segment

Sub-phylum Crustacea: Crabs and Lobsters

Crab & lobster fisheries

- adapted to benthic habitat
- large clawed lobsters & freshwater crayfish
- clawless lobsters (slipper & spiny)
- True crabs (Brachyurans), include blue crab
- king and snow crab are valuable fisheries
- coconut crabs (land crabs)

Sub-phylum Vertebrata

- · Over half of all Vertebrates are fish
- Approximately 26,000 species
- Tremendous diversity & abundance
- Chondrichthyes (sharks and rays)
- Osteichthyes (bony fishes), 25,000 spp.
 > Diverse in size, habitats, life history

Fisheries involving Vertebrates (fishes)

Clupeidae & Engraulidae (herrings and anchovies)

- · pelagic, typical occur in upwelling areas
- very large fisheries
- 27% by weight of world catch
- · primarily canned or pickled, or ground

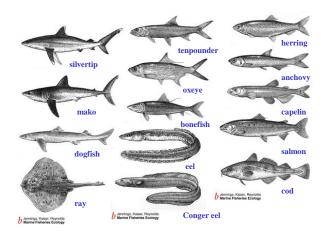

Gadidae (cods)

- · large demersal fish
- · cool temperate waters in northern hemisphere
- exploited for centuries

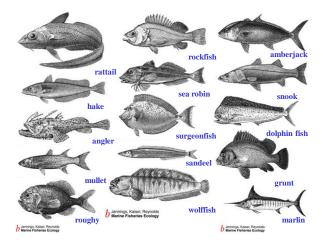

Merluccidae (hakes)

 wider temperate distribution than cods

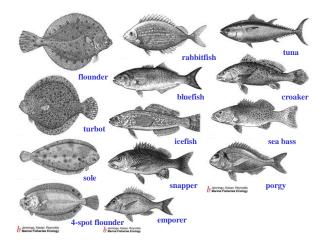

SPECIES	POUNDS	VALUE (\$)	SPECIES	POUNDS	VALUE (\$)
Amberjacks	128,762	\$95,599	Groupers, Other	11,761	\$31,473
