

## EUSPORANGIA AND LEPTOSPORANGIA

Eusporangium	Leptosporangium
Relatively large	Relatively small
Thick-walled (several cell-layers thick)	Thin-walled (1 cell-layer thick)
Many spores (100's to many 1000's)	Usually just 64 spores
No specialized dehiscence mechanism	Dehisce via an <i>annulus</i>
No stalk	Stalked
Form from several initial cells	Form from just one initial cell
