1.1 Four Ways to Represent a Function

1.1 Four Ways to Represent a Function

- 1.1 Four Ways to Represent a Function
- 1.2 Some Basic Functions
- Basic Functions (cont.)
- Basic Functions (cont.)

▲ What is a function?

Let A and B be two sets. A *function* f from A to B is a *relation* between A and B such that any element x in A , there is a *unique* corresponding element y in B .

▲ Representation of functions

- verbally (by a description in words)
- numerically (by a table)
- visually (by a graph)
- algebraically (by an explicit formula)

▲ Domain of a function

- defined strictly from algebra sense
- defined according to application

▲ The Vertical Line Test

▲ Piecewise functions

▲ Even and Odd functions

▲ Increasing and Decreasing Functions:

A function f is called *increasing* on an interval I if

$$f(x) < f(y)$$

whenever $x < y$ in I .

It is called *decreasing* on I if

$$f(x) > f(y)$$

whenever $x < y$ in I .

1.2 Some Basic Functions

► 1.1 Four Ways to
Represent a Function

◊

► 1.2 Some Basic Functions

► Basic Functions (cont.)

► Basic Functions (cont.)

▲ Polynomials

$$f(x) = a_n x^n + a_{n-1} x^{n-1} + \cdots + a_2 x^2 + a_1 x + a_0$$

where $a_n, a_{n-1}, \dots, a_0$ are constants called the *coefficients* of the polynomial.

Domain?

▲ Power Functions

$$f(x) = x^a$$

where a is a constant. (review the conversion between rational exponents and radical sign.)

Basic Functions (cont.)

- 1.1 Four Ways to Represent a Function
 - 1.2 Some Basic Functions
 - Basic Functions (cont.)**
 - Basic Functions (cont.)

▲ Rational Functions

$$f(x) = \frac{P(x)}{Q(x)}$$

where $P(x)$ and $Q(x)$ are polynomials.

Domain: $\{x | Q(x) \neq 0\}$.

- ▲ Algebraic Functions: Those function can be constructed from polynomials.

$$f(x) = \sqrt{x^2 + 1}, \quad g(x) = x^3 - \frac{x^3 - x - 1}{\sqrt[3]{x - 1}}$$

▲ Trigonometric Functions

$$\sin(x), \quad \cos(x), \quad \tan(x), \quad \cot(x), \quad \sec(x), \quad \csc(x)$$

Basic Functions (cont.)

- 1.1 Four Ways to Represent a Function
 - 1.2 Some Basic Functions
 - Basic Functions (cont.)
 - Basic Functions (cont.)

▲ Exponential Functions

$$f(x) = a^x$$

where $a > 0, a \neq 1$. In particular $f(x) = e^x$.

▲ Logarithmic Functions

$$f(x) = \log_a x$$

where $a > 0, a \neq 1$ and $x > 0$.

In particular, $f(x) = \ln x = \log_e x$.

▲ Transcendental Functions: Those functions are not algebraic.

Examples: Trigonometric, inverse trigonometric, exponential and logarithmic functions.
