The Definite Integral as a Limit

- ▣ The Definite Integral as a Limit

- ▣ The Existence of Definite

- Integrals

- ▣ Estimating Area Under a Function

- ▣ Properties of the Definite Integral

- ▣ Example

- ▣ Comparison Properties of the Definite Integral

- ▣ Example

Let f be a function defined on a closed interval $[a, b]$. For any partition P of $[a, b]$, let the numbers c_k be chosen arbitrarily in the subintervals $[x_{k-1}, x_k]$.

If there exists a number I such that

$$\lim_{||P|| \rightarrow 0} \sum_{k=1}^n f(c_k) \Delta x_k = I$$

no matter how P and the c_k 's are chosen, then f is **integrable** on $[a, b]$ and I is the **definite integral** of f over $[a, b]$.

The Existence of Definite Integrals

- ◊ The Definite Integral as a Limit
- ◊ The Existence of Definite Integrals
- ◊ Estimating Area Under a Function
- ◊ Properties of the Definite Integral
- ◊ Example
- ◊ Comparison Properties of the Definite Integral
- ◊ Example

Theorem: All continuous functions are integrable. That is, if a function f is continuous on an interval $[a, b]$, then its definite integral over $[a, b]$ exists.

Notation:

$$\int_a^b f(x) \, dx$$

Estimating Area Under a Function

- ◉ The Definite Integral as a Limit
- ◉ The Existence of Definite Integrals
- ◉ Estimating Area Under a Function
- ◉ Properties of the Definite Integral
- ◉ Example
- ◉ Comparison Properties of the Definite Integral
- ◉ Example

Using mid-point rule with $n = 5$ to estimate

$$\int_0^1 \frac{1}{1+x^2} dx.$$

Properties of the Definite Integral

- ▢ The Definite Integral as a Limit
- ▢ The Existence of Definite Integrals
- ▢ Estimating Area Under a Function
- ▢ Properties of the Definite Integral
- ▢ Example
- ▢ Comparison Properties of the Definite Integral
- ▢ Example

$$1. \int_a^b f(x)dx = - \int_b^a f(x)dx.$$

$$2. \int_a^a f(x)dx = 0.$$

$$3. \int_a^b cdx = c(b - a), \text{ where } c \text{ is a constant.}$$

$$4. \int_a^b [f(x) \pm g(x)]dx = \int_a^b f(x)dx \pm \int_a^b g(x)dx.$$

$$5. \int_a^b cf(x)dx = c \int_a^b f(x)dx.$$

$$6. \int_a^b f(x)dx = \int_a^c f(x)dx + \int_c^b f(x)dx.$$

Example

Example If $\int_0^1 f(x)dx = 10$ and $\int_8^{10} f(x)dx = 12$, find $\int_8^{10} f(x)dx$.

Comparison Properties of the Definite Integral

- The Definite Integral as a Limit
- The Existence of Definite Integrals
- Estimating Area Under a Function
- Properties of the Definite Integral
- Example
- Comparison Properties of the Definite Integral
- Example

1. If $f(x) \geq 0$ for all x in $[a, b]$, then

$$\int_a^b f(x)dx \geq 0.$$

2. If $f(x) \geq g(x)$ for all x in $[a, b]$, then

$$\int_a^b f(x)dx \geq \int_a^b g(x)dx.$$

3. If $m \leq f(x) \leq M$ for all x in $[a, b]$, then

$$m(b - a) \leq \int_a^b f(x)dx \leq M(b - a)$$

Example

Example Estimate

$$\int_0^{\pi/4} \cos x \, dx$$
