The Natural Logarithmic Function

▢ The Natural Logarithmic Function

- ▢ The Derivative of \ln
- ▢ Application of the Derivative
- ▢ Properties of \ln
- ▢ Asymptotes
- ▢ The Number e Redefined

Definition

The **natural logarithmic function** is the function defined for $x > 0$ by

$$\ln x = \int_1^x \frac{1}{t} dt$$

The Derivative of \ln

- ▢ The Natural Logarithmic Function

- ▢ The Derivative of \ln

- ▢ Application of the Derivative

- ▢ Properties of \ln

- ▢ Asymptotes

- ▢ The Number e Redefined

Note that

$$\frac{d}{dx} [\ln x] = \frac{1}{x}$$

follows immediately from the definition of $\ln x$ and the Fundamental Theorem of Calculus.

It is also true that

$$\frac{d}{dx} [\ln |x|] = \frac{1}{x}$$

Application of the Derivative

▢ The Natural Logarithmic Function

▢ The Derivative of \ln

▢ Application of the Derivative

▢ Properties of \ln

▢ Asymptotes

▢ The Number e Redefined

EXAMPLE: Find $\frac{d}{dx} [\ln(2 + \cos x)]$

EXAMPLE: Find $\frac{d}{dx} [\ln(\cos^2 x)]$

EXAMPLE: Find $\int \frac{1}{x+3} dx$

EXAMPLE: Find $\int \frac{x}{x^2+3} dx$

Properties of \ln

▢ The Natural Logarithmic Function

▢ The Derivative of \ln

▢ Application of the Derivative

▢ Properties of \ln

▢ Asymptotes

▢ The Number e Redefined

Theorem

If a and b are positive numbers and r is any rational number, then

$$1. \ln 1 = 0$$

$$2. \ln ab = \ln a + \ln b$$

$$3. \ln \frac{a}{b} = \ln a - \ln b$$

$$4. \ln a^r = r \ln a$$

Asymptotes

▢ The Natural Logarithmic Function

▢ The Derivative of \ln

▢ Application of the Derivative

▢ Properties of \ln

▢ Asymptotes

▢ The Number e Redefined

EXAMPLE: Find the horizontal and vertical asymptotes of $y = \ln x$.

The Number e Redefined

▢ The Natural Logarithmic Function

▢ The Derivative of \ln

▢ Application of the Derivative

▢ Properties of \ln

▢ Asymptotes

▢ The Number e Redefined

Definition

e is the number such that $\ln e = 1$
