<ul> <li>Instructions</li> <li>1. Do all of your work in this booklet. Do not tear off any sheets.</li> <li>2. SHOW ALL OF YOUR STEPS in the problems.</li> <li>3. Be clear and neat in your work. Any illegible work, or scribbling in the margins, will not be graded.</li> <li>4. Place a box around your answers.</li> <li>5. Place your name on all of the pages.</li> <li>6. If you need more space, you may use the back of a page, and write On back of page in the problem space.</li> </ul>			<ul> <li>iii. Write log(a<sup>2</sup>√b)<sup>4</sup> in terms of simple logarithms of <i>a</i>, <i>b</i>.</li> <li>iv. Let z = 5<sup>3x</sup>. Write the simplest equivalent logarithmic expression.</li> </ul>			
Probem 1. Multiple Guess (7 pts) In this section, find						
the answer which best fits the question and write it in						
the space provided.				v. Simplify the expression: $\log_2 3 \log_3 4$ .

Problem 3. Inverses and Graphs(11 pts)	Problem 4. Applications (13 pts)
a) Find the inverse of $f(x) = \frac{x}{x+3}$ .	a) Your parents lend you \$5000 at 4% compounded monthly.
	i. What is the amount that you owe after three years?
	compounded the interest for the same time at 4%?
	compounded the interest for the same time at 470.
b) What are the domains and ranges of $f(x)$ and $f^{-1}(x)$	
in part a)?	
	b) A culture of bacteria grows exponentially. If 500 are
	present initially, and there are 800 after one hour,
	now many will be present after 5 hours?
