

Review 2 Math 335

Any term in **bold face** know the definition well enough to state it on the test. The definition you give should be very similar to the one in the book or one with similar detail.

Section 2.8 **Subspace, Column space, null space, basis** ,

Sample problems Example 7 Exercises 17,23

Section 2.9 **coordinate of x relative to β , dimension, rank, Rank Theorem Basis Theorem** Be able to apply the invertible matrix theorem

Sample problems Example 1 Exercises 9,13

Section 3.1-3.2 **triangular matrix**, be able to apply Theorems 1-6

Sample problems Example 3.1-2 3.2-3,6

Section 5.1 **eigenvector, eigenvalue, eigenspace**, be able to apply Theorems 1-2

Sample problems Example 4 Exercises 15,25, 26

Section 5.2 **characteristic equation, similar , multiplicity** , be able to apply and prove Theorem 4

Sample problems Example 5, Exercises 3

Section 5.3 **diagonalizable** ,be able to apply Theorems 5,6

Sample problems Example 3 Exercises 13

Section 5.5 be able to show complex eigenvalues occur in conjugate pairs for real matrices(pg338)

Sample problems Example 2 Exercises 3

Section 5.7 Sample problems Example 2 Exercises 5
