

**Do not use a calculator on this test!**

Seat: \_\_\_\_\_

**Show all your work! Full credit is based on work shown!**

9pts

1. **Without actually dividing**, use divisibility tests to determine if 85,932 is divisible by each of the following numbers.

a. Does  $9 \mid 85,932$ ? yes Show the **divisibility test for 9**: <sup>1 pt</sup> 2 pts

$9 \mid (8+5+9+3+2) \Rightarrow 9 \mid 27$  or 9 must divide the (sum of all digits)

b. Does  $7 \mid 85,932$ ? yes Show the **divisibility test for 7**: <sup>7</sup>

$$\begin{array}{r} 8593 \\ - 4 \\ \hline 8589 \end{array} \quad \begin{array}{r} 858 \\ - 18 \\ \hline 840 \end{array} \quad \begin{array}{r} 84 \\ - 0 \\ \hline 84 \end{array} \quad \begin{array}{r} 84 \\ - 8 \\ \hline 76 \end{array} \quad \begin{array}{r} 76 \\ - 0 \\ \hline 76 \end{array} \quad \begin{array}{r} 76 \\ - 7 \\ \hline 69 \end{array} \quad \begin{array}{r} 69 \\ - 0 \\ \hline 69 \end{array} \quad \begin{array}{r} 69 \\ - 6 \\ \hline 63 \end{array} \quad \begin{array}{r} 63 \\ - 0 \\ \hline 63 \end{array} \quad \begin{array}{r} 63 \\ - 5 \\ \hline 58 \end{array} \quad \begin{array}{r} 58 \\ - 0 \\ \hline 58 \end{array} \quad \begin{array}{r} 58 \\ - 5 \\ \hline 53 \end{array} \quad \begin{array}{r} 53 \\ - 0 \\ \hline 53 \end{array} \quad \begin{array}{r} 53 \\ - 4 \\ \hline 49 \end{array} \quad \begin{array}{r} 49 \\ - 0 \\ \hline 49 \end{array} \quad \begin{array}{r} 49 \\ - 4 \\ \hline 45 \end{array} \quad \begin{array}{r} 45 \\ - 0 \\ \hline 45 \end{array} \quad \begin{array}{r} 45 \\ - 4 \\ \hline 41 \end{array} \quad \begin{array}{r} 41 \\ - 0 \\ \hline 41 \end{array} \quad \begin{array}{r} 41 \\ - 3 \\ \hline 38 \end{array} \quad \begin{array}{r} 38 \\ - 0 \\ \hline 38 \end{array} \quad \begin{array}{r} 38 \\ - 3 \\ \hline 35 \end{array} \quad \begin{array}{r} 35 \\ - 0 \\ \hline 35 \end{array} \quad \begin{array}{r} 35 \\ - 3 \\ \hline 32 \end{array} \quad \begin{array}{r} 32 \\ - 0 \\ \hline 32 \end{array} \quad \begin{array}{r} 32 \\ - 2 \\ \hline 30 \end{array} \quad \begin{array}{r} 30 \\ - 0 \\ \hline 30 \end{array} \quad \begin{array}{r} 30 \\ - 2 \\ \hline 28 \end{array} \quad \begin{array}{r} 28 \\ - 0 \\ \hline 28 \end{array} \quad \begin{array}{r} 28 \\ - 2 \\ \hline 26 \end{array} \quad \begin{array}{r} 26 \\ - 0 \\ \hline 26 \end{array} \quad \begin{array}{r} 26 \\ - 2 \\ \hline 24 \end{array} \quad \begin{array}{r} 24 \\ - 0 \\ \hline 24 \end{array} \quad \begin{array}{r} 24 \\ - 2 \\ \hline 22 \end{array} \quad \begin{array}{r} 22 \\ - 0 \\ \hline 22 \end{array} \quad \begin{array}{r} 22 \\ - 2 \\ \hline 20 \end{array} \quad \begin{array}{r} 20 \\ - 0 \\ \hline 20 \end{array} \quad \begin{array}{r} 20 \\ - 2 \\ \hline 18 \end{array} \quad \begin{array}{r} 18 \\ - 0 \\ \hline 18 \end{array} \quad \begin{array}{r} 18 \\ - 2 \\ \hline 16 \end{array} \quad \begin{array}{r} 16 \\ - 0 \\ \hline 16 \end{array} \quad \begin{array}{r} 16 \\ - 2 \\ \hline 14 \end{array} \quad \begin{array}{r} 14 \\ - 0 \\ \hline 14 \end{array} \quad \begin{array}{r} 14 \\ - 2 \\ \hline 12 \end{array} \quad \begin{array}{r} 12 \\ - 0 \\ \hline 12 \end{array} \quad \begin{array}{r} 12 \\ - 2 \\ \hline 10 \end{array} \quad \begin{array}{r} 10 \\ - 0 \\ \hline 10 \end{array} \quad \begin{array}{r} 10 \\ - 2 \\ \hline 8 \end{array} \quad \begin{array}{r} 8 \\ - 0 \\ \hline 8 \end{array} \quad \begin{array}{r} 8 \\ - 2 \\ \hline 6 \end{array} \quad \begin{array}{r} 6 \\ - 0 \\ \hline 6 \end{array} \quad \begin{array}{r} 6 \\ - 2 \\ \hline 4 \end{array} \quad \begin{array}{r} 4 \\ - 0 \\ \hline 4 \end{array} \quad \begin{array}{r} 4 \\ - 2 \\ \hline 2 \end{array} \quad \begin{array}{r} 2 \\ - 0 \\ \hline 2 \end{array} \quad \begin{array}{r} 2 \\ - 2 \\ \hline 0 \end{array}$$

or Double the last digit & subtract from rest of #. Repeat as necessary till the result is small enough to easily see if it is div. by 7.

c. Does  $11 \mid 85,932$ ? yes Show the **divisibility test for 11**:

$(8+9+2) - (5+3) = 19 - 8 = 11$  or 11 must divide the difference of the sums from alternated digits

5pts

2. Complete the following five digit number so that it is divisible by 6. Give all possible answers; show the divisibility test for 6.

<sup>2 pts</sup> 53,430 or 53,436

$(5+3+4+3+x)$   
 $(15+0)$  or  $(15+6)=21$

To be divisible by 6 # must be divisible by both 2 & 3. Thus last digit must be even & the sum of all digits must be divisible by 3.

13pts

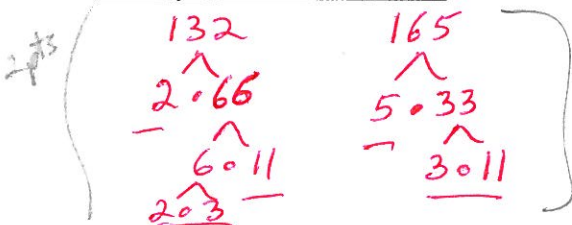

3. a. The **prime factorization** of 132 is  $2 \cdot 2 \cdot 3 \cdot 11$

c. Draw a Venn Diagram to show how the prime factors of 132 and 165 are related.

b. The **prime factorization** of 165 is  $3 \cdot 5 \cdot 11$

Show your factor trees here:

d. The GCF (132, 165) = 33 <sup>2 pts</sup>

"Build-up method"  $4(165) = 660$   
 $(132) \cdot 5 = 660$

e. The LCM (132, 165) = 660 <sup>2 pts</sup>

6pts.

4. Show all your steps in the following addition problem, using the LCM from problem 3e & simplify your answer, if possible.

$\frac{5}{5} \frac{7}{132} + \frac{13}{165} \frac{4}{4} = \frac{35}{660} + \frac{52}{660} = \frac{87}{660} = \frac{29}{220}$

$8+7=15$  so its divisible by 3

only need to test for div. by  
 prime #  $\leq \sqrt{103}$

3pts

5. Is 103 a prime number? yes Explain, using the definition of a prime number and divisibility tests:

Must test for divisibility by 2, 3, 5 + 7

A prime number has exactly two factors, the # itself and 1.

6pts

6. Rewrite each of the following with a single exponent. Include your work to show the rules of exponents that you used.

a.  $(7^5 \cdot 7^3) = 7^{(5+3)} = 7^8$

b.  $\frac{6^7}{6^3} = 6^{(7-3)} = 6^4$

c.  $6^3 \cdot 4^2 \cdot 3^4 = 6^3 \cdot (2^2)^2 \cdot 3^4 = 6^3 \cdot 2^4 \cdot 3^4 = 6^3 \cdot 6^4 = 6^7$

3pts

7. Mentally determine which is larger  $9^{11}$  or  $3^{20}$ ?  $9^{11}$  Justify your answer using the rules of exponents.

3pts

8. Is the set of whole number multiples of four  $\{0, 3, 6, 9, 12, 15, 18, 21, \dots\}$  closed for division? No Explain:

When you divide two #s from the set, the answer may be a number that is not in the set.

6pts

9. Name three properties for addition of whole numbers and give an example for each one.

(order) Commutative Property

$5 + 3 = 3 + 5$

(grouping) Associative Property

$(2 + 3) + 4 = 2 + (3 + 4)$

Identity

$8 + 0 = 8$

6pts (3pts each)

10. Illustrate that  $4 \times 2 = 8$ , using the following:

a. number line

b. set model

-1pt if either or both illustrate  
 $2 \times 4 = 8$

6pts

11. Illustrate that  $8 - 5 = 3$ , using:

a. number line

b. set model

6pts

12. Fill in the blanks using the definition of division, **writing each division equation as a multiplication equation**. (If there is no valid answer put "undefined" and show why.)

a.  $35 \div 7 = \underline{5}$  because  $\underline{5} \times \underline{7} = 35$

b.  $0 \div 12 = \underline{0}$  because  $\underline{0} \times 12 = 0$

c.  $0 \div 0 = \underline{\text{undefined}}$  because there is no unique solution for  $\boxed{?} \times 0 = 0$

2pts

13. Fill in the blank using the **definition of "less than"**:  $7 < 12$  because  $7 + 5 = 12$

6pts (3pts each)

14. Write out the steps to show an easy way to **mentally calculate** each of the following: Give the exact answer, not an estimate and do not use standard paper and pencil methods.

a.  $25 \times 19 - 25 \times 11$  (Distributive prop)  
 $25(19 - 11) = 25(8) = 200$

b.  $557 - 5 \rightarrow 552$   
 $+ 395 + 5 \rightarrow + 400$   
 $952$

4pts 2 each

15. a. **Estimate** using compatible numbers.

$3426 \div 49 \approx 3500 \div 50 = 70$

b. **Estimate** using the range method.

2000	2625	3000
0	420	1000
<u>3000</u>	<u>3376</u>	<u>4000</u>
5000		8000

5pts

16. Rosa wants to make a game board that is 16 inches by 24 inches for a game she has invented. She will use square tiles. What are the dimensions of the **largest tile** Rosa can use? ( $8 \times 8$ )  
 [Answer this showing all your work & list your problem solving strategies.]

work 3pts

Draw a diagram or guess + test  
 Use properties of #'s, GCF

1pt answer

11pts

17. Do each of the following problems in **base five** arithmetic:

Show your work on this number line to illustrate how to determine the necessary number facts.

Subtraction facts

1pt multiples of 3

1pt multiples of 4

a. Subtract in **base five**:

3pts 
$$\begin{array}{r} 34 \\ - 234 \\ \hline 113 \end{array}$$

b. Multiply:  $321 \times 43$  in **base five**: using lattice multiplication.

(optional check)  

$$\begin{array}{r} 321 \\ \times 43 \\ \hline 2013 \\ 2334 \\ \hline 204A2 \end{array}$$

4pts # facts  
 1pt + correct
