

Lab-Score Comments for PSY410, Fall 2013

Code	Lab 7	
0002	9	Q8: Does not explain the possible causes for the effect. -1
0044	9	Q8: A stimulus response effect is not the difference between items 6 & 7 but a positive value on either or both. -1
1123	8	Q1: Hard-coded averages, not formulas. -1 Q8: Positive numbers for items 6 & 7 mean you did show a stimulus/response effect. -1
1137	10	
1633	9	Q8: A stimulus response effect is not the difference between items 6 & 7 but a positive value on either or both. -1
2888	7	Q8: A stimulus response effect is not the difference between items 6 & 7 but a positive value on either or both. -1 Late. -2
3588	9	Q8: Does not explain the possible causes for the effect. -1
4398	9	Q8: Does not explain the possible causes for the effect. -1
4533	9	Q8: Does not explain the possible causes for the effect. -1
5243	10	
5265	9	Q8: Does not explain the possible causes for the effect. -1
7488	9	Q8: Does not explain the possible causes for the effect. -1
7504	8	Q8: Does not explain the possible causes for the effect. -1 Q9: Not answered. -1
7956	0	Not submitted.
8321	9	Q8: Showed a stimulus/response effect for word repetition, but not non-word repetition. -1
8546	10	
9300	8	Q4: A negative value means you were faster for unassociated pairs, thus no semantic priming effect. -1 Q8: Does not explain the possible causes for the effect. -1
9836	10
